ECOMITO: BRIDGING CELLULAR PERFORMANCE TO ECOPHYSIOLOGY

Synopsis:

This symposium is dedicated to the exploration of bioenergetics across different biological scales, from the intricacies of mitochondrial processes to the broader scope of whole-organism performance, and from cellular mechanisms to ecosystem dynamics.

It will serve as a platform for discussing how energy metabolism drives adaptation in response to environmental changes, with a particular emphasis on the particular ecological context.

Organised By:

- Dr. Elisa Thoral (La Rochelle University)
- Dr Loïc Teulier (Claude Bernard University LYON 1)
- Dr. Enrique Rodriguez (University College London)
- Dr Jules Devaux (University of Auckland)

Keynote speakers:

- Lucie Gerber (University of Oslo)
- Damien Roussel (University Claude Bernard of Lyon)
- Jim Staples (Western University)
